

Performance information improves the structural benchmark

MIN270: 1,059 eligible transfers. Compare models within each panel.

M1 structural | M2 + traditional | M3 + advanced | M4 combined, training-local selection

Fold-local CV uses the 847-row holdout-training partition; grouped CV uses all 1,059 rows.

SD is fold variation, not a confidence interval. Different samples and aggregation: do not average across panels.
